

Sharing information in the office could not be easier .

A smarter digital signage solution to effectively distribute useful information to employees and visitors and improve branding in the office.

HOW DOES IT WORK?

With drag-and-drop widgets, you can customise the information and design of each slide that will run in a loop. You can schedule slides and widgets, ensuring outdated information is automatically removed.

WHAT CAN BE DISPLAYED?

Only your creativity limits what can be displayed on the info screens in the office. Fully customisable with your logo and colours.

It only takes a few minutes to showcase new contracts won, booked meeting rooms, wayfinder, weather forecasts, train schedules, RSS feed, videos, welcome messages, internal events and more.

THE TECHNICALITIES

The software runs on Raspberry PI – a very small, custom-built computer that can easily be attached to your existing monitor. It can also run on monitors with built-in Digital Signage software.

Arribatec helps you set up and get going.
